

Geo-environmental Testing Advisory

May 31, 2017 – As part of the New Westminster Secondary School Replacement Project, Golder Associates will be conducting geo-environmental tests and environmental monitoring on the school property. These drill hole tests will be monitored by archaeologists where appropriate, and will provide supplemental data regarding soil composition and allow for further monitoring through construction of the new school.

We wanted to provide an update as you might see a crew of four to eight workers and equipment in the school yard over the coming days.

Start date: May 30, 2017

Estimated duration: 2 weeks

Contact: New Westminster School District
